

Dental Unit Water Testing Program

The EPA Recommends Quarterly Testing of Dental Unit Water in Each of Your Operatories

It is recommended that testing of dental unit water be conducted quarterly to ensure it meets CDC guidelines for bacteria levels. Centers for Disease Control and Prevention recommends that all dental unit water be below 500 colony forming units of heterotrophic water bacteria per ml of water. This easy-to-use kit provides in-office results and describes how to resolve elevated bacteria levels. In addition, the kit provides assistance with establishing protocol for continued compliance.

Features include:

- In-office reporting
- Helps to meet CDC Guidelines
- Protects patients
- OSHA and Infection Control Audit Program

WTK-A	1 Unit	\$24.95
WTK-B	4 Units	\$89.95
WTK-C	8 Units	\$159.95
WTK-D	12 Units	\$199.95
WTK-E	24 Units	\$372.95

AquaSafe® Evacuation System Cleaner

Bacterial-Based Cleaner is Safe for Equipment, the Environment, and Staff

- Bacterial-based cleaner provides residual overnight debris removal from cuspidor drains and suction systems
- Works under all conditions, even in cold water
- Neutral pH, safe for amalgam separators and traps
- AquaSafe® leaves a fresh, clean scent at the solid traps and throughout the entire evacuation system
- Environmentally friendly - 6 non-pathogenic bacteria provide safe and natural cleaning power
- AquaSafe® ensures a level of protection that cannot be matched by other evacuation system cleaners that simply mask odor

AquaSafe® Enzymatic Cleaner

Enzymatic Ultrasonic and Instrument Pre-Soak Solution

AquaSafe® Enzymatic Ultrasonic and Instrument Pre-Soak Solution is a highly effective and compliant enzymatic solution. It cleans blood, tissue, mucus, and other debris from instruments, burs, endodontic files, crowns, bridges dentures, partial dentures and orthodontic appliances. The product also allows for full compliance with EPA requirements by having a neutral pH, utilizing enzymatic action rather than harsh chemicals.
